

Development of High Water Security Multi Project Management

Task

Within the infrastructural development of the HafenCity redundant flood-roofed access roads on +7,50 m above sealevel are to realize.

Overview Hafen City West

This includes among others the new construction of „Neue Achse Ost“ along with Brooktorhafen-bridge. This about 400 tons heavy road bridge has been mounted on the land side after decentralized preassembly and then has been moved into its final position.

In close proximity arises the International Maritime Museum from the foundation Tamm in the historic quay storehouse B, which gets access by a new pedestrian bridge from St. Annenplatz.

New museum bridge to the quai storehouse B

Solution

Accompanying the immediate development projects like e.g. the heightening of Magdeburger Straße and of the Brooktor in consequence repeatedly overbuilt quay walls repairs must be set, supply lines are to be renewed and above all the affected neighbours have to be integrated, if necessary, with their own construction measures.

The planned tasks within a narrowly defined project organization has been beside the classical project management consisting of

- Project organization and coordination
- Cost-controlling and monitoring
- Time Schedule control and monitoring

Brooktorhafen bridge during move

- Assignment support
- Addendum and claim management
- Acceptances

the technical planning examination during design and tender phase as well as a fine-membered interface management.
